                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
 Lactococcus
                                      16-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part
                                                                      ABB54213;
                                                                                                       ABB54213 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

Note: The sequence data for this patent is based on equivalent patent w0200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the imposition are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella components are services and Enterococcus faecalis. The service invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an cessential prokaryotic cellular proliferation protein.

Componential prokaryotic cellular proliferation for the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                              (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis.
(I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polynucleotide sequences from the present invention. AAH55091 to
                                                                                                                                                                                                                                            AAH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention.

N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Staphylococcus epidermidis

                                         Sequence
                                                              This sequence (AAR56479) is that of sorbitol dehydrogenase. The presence of eleven amino acids of the sorbitol dehydrogenase from its N-terminal in a fusion polypeptide results in several fold higher levels of expression of the fused polypeptides as compared to the unfused polypeptide. The DNA encoding the enzyme is shown in AAQ66579, it is useful for its regulatory elements. These can be used in yeast hosts for the production of heterologous proteins, eg. superoxide dismutase or the hepatitis delta antigen.
                                                                                                                                                                                                  Claim 27; Page 31-34; 60pp; English.

The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments it are useful for selecting probes and primers for detecting genes in monocytogenes and related organisms, and for studying genetic
                                                                                                            Genomic sequence for Listeria monocytogenes, useful e.g. for and prevention of Listeria and related bacterial infections, related polypeptides
                                                                                                                                                                               WPI;

                                                                                                                                                                                                                                                                                                    AAE05988;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, antibodies, identification of L. monocytogenes and related organisms.
                                                                                                                                                                                                                                                                    24-SEP-2001
                                                                                                                                                                                                                                                                                                                                 AAE05988 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

The recombinant hosts of the invention have been engineered to enhance the production of the pentose phosphate pathway intermediates, or the production of one or more of xylitol, D-arabicol, D-arabinose, D-lyxose, ribitol, D-ribose, D-ribuse, D-xylose and/or D-xylulose, D-lyxose, ribitol, D-ribose, D-ribused in a microbial host cell to produce recombinant arabitol. Xylitol phosphate dehydrogenase (XPDH) and arabitol phosphate dehydrogenase are used in a microbial host cell to produce recombinant xylitol. The present sequence, is Clostridium difficile homologue protein which is homologous to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated polynucleotide, used to transform bacterial or yeast hosts which can then be used in the production of sugars and sugar alcohols, encodes xylitol phosphate dehydrogenase -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 16; Page 199-200;

The invention useful in developmental biology and in elucidating cell signalling and. cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLI6176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB72072).

The recombinant hosts of the invention have been engineered to enhance the production of the pentose phosphate pathway intermediates, or the production of one or more of xylitol, D-arabitol, D-arabinose, D-lyxose, ribitol, D-ribose, D-ribulose, D-xylose and/or D-xylulose. Arabitol phosphate dehydrogenase (APDH) is used in a microbial host cell to produce recombinant arabitol. Xylitol phosphate dehydrogenase (XPDH) and arabitol phosphate dehydrogenase are used in a microbial host cell to produce recombinant xylitol. The present sequence is Bacillus halodurans sorbitol dehydrogenase protein which is homologous to Lactobacillus rhammosus XPDH protein.
                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 14; Page 197-198; 205pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated polynucleotide, used to transform I which can then be used in the production of encodes xylitol phosphate dehydrogenase -

The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101640-ABL16175) and the encoded proteins (ABL101840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                      specification, but was writered in quences at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                              studies facilitating better understanding of carbohydrate metabolism and function in plants, for providing genetic tools for the manipulation of the sorbitol biosynthetic pathway, and for providing means to control
                                                                                                                                                                  The sequences given in AAH43311-17 encode enzymes which were used for comparison in the isolation of proteins having aldehyde reductase activity. The isolated aldehyde reductase sequences were identified based on Clustal alignment method. The aldehyde reductase cDNA, operatively linked to a plant specific promoter, is useful for altering the level of expression of aldehyde reductase in a transformed host cell. The aldehyde reductase is also useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid sequence encoding a polypeptide having aldehyde activity, useful for transforming plants with altered levels expression of sorbitol biosynthetic enzymes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Glycine max.

related polypeptides

polymorphisms encoded by the

monocytogenes it are useful

invention relates to the genome sequence of Listeria es EGD e (see ABA03041). The genome sequence and fragments ul for selecting probes and primers for detecting genes in es and related organisms, and for studying genetic es and other genomes. The present sequence is a protein the control of the present sequence.

F of

Genomic sequence for Listeria monocytogenes, useful e.g. for and prevention of Listeria and related bacterial infections,

treatment and

The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAM47254 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                     Arxula

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method of producing proteins in yeast from the genus Arxula, involving cloning a nucleic acid into an expression vector under the control of an inducible promoter from Arxula, transforming Arxula cells with the vector, culturing the cells, inducing the promoter and harvesting the desired protein. This can be used to produce proteins including insulin, phytase, human growth hormone, hirudin, lactoferrin and granulocyte colony-stimulating factor. The present sequence is an Arxula adeninivorans membrane protein coded for by the AXOH gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (RHEI-)
                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 15; Fig 31; 125pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Producing proteins in Arxula yeast, useful e.g. for preparing insulin, by expression under control of specific inducible or constitutive

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being p and is derived by analysis of the total score distribution.

L-iditol 2-dehydrogenase (EC 1.1.1.14) - silkworm N; Alternate names: sorbitol dehydrogenase C; Species: Bombyx mori (silkworm) C; Date: 06-Jan-1995 #sequence_revision 06-Jan-1995 C; Accession: S32484 R; Nilmi, T.; Yamashita, O.; Yaginuma, T.

#text_change 16-Jun-2000

Eur. J. Biochem. 213, 1125-1131, 1993 A;Title: A cold-inducible Bombyx gene

O.; Yaginuma, 125-1131, 1993

encoding a protein similar to

mammalian

sorbito

```
C;Function:

A;Description: catalyzes the oxidation by NAD+ of sorbitol to fructose
A;Description: catalyzes the oxidation by NAD+ of sorbitol to fructose
C;Superfamily: alcohol dehydrogenase; long-chain alcohol dehydrogenase homology
C;Keywords: homotetramer; metalloprotein; NAD; oxidoreductase; zinc
F;25-337/Domain: long-chain alcohol dehydrogenase homology <LADH>
F;170-199/Region: beta-alpha-beta NAD nucleotide-binding fold
F;40,65,151/Binding site: zinc, catalytic (Cys, His, Gin) #status predicted
F;95,98,101,109/Binding site: zinc, noncatalytic (Cys) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Molecule type: mRNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360.5
